

**Statement by EUPHANxt, the Law and Public Health section
and the Public health policy and politics section
Voting as a Pillar of Public Health**

A call to vote

Health and democracy are inextricably linked.¹ Democracy thrives when citizens engage actively in the electoral process, expressing their will and aspirations through the power of their votes.² Their collective voices determine who will be entrusted with safeguarding the health and well-being of everyone and sends a signal about which policies they should adopt. Through this process, individuals can play a role in creating the laws that are passed³ and hold governments to account for their actions.⁴ For these reasons, the right to vote and public participation ‘lies at the core of democratic government’⁵. However, not everyone who can vote does so. If voting is the vital link between health and politics, then without active participation in the electoral process, this link will be broken. It is imperative that, by voting, we maintain and strengthen this crucial connection.

Narrowing inequalities

Voting is more than a civic duty; it is a fundamental instrument for advancing public health objectives. By voting, individuals can influence public policy, shaping the rules that impact the health of all of us.

This is especially important for the choices that are made about health systems, defined by the World Health Organization as something that ‘delivers preventive, promotive, curative and rehabilitative interventions through a combination of public health actions and the pyramid of health care facilities that deliver personal healthcare -by both State and non-State actors’.⁶ ‘Good service delivery’.⁷ But health systems must be designed in ways that allow them to respond to those in greatest need. Fundamentally, they are a means of redistributing resources, from healthy to ill,

from young to old, and from rich to poor. If they fail to do so they will widen inequalities. So we need political leaders who will make these often difficult choices.

But this is not the only area where voting can influence disparities in health.⁸ The COVID-19 pandemic reminded us of the crucial role of those in power communicating pandemic-related information, implementing measures to mitigate its spread and allocating resources for healthcare. The political decisions they made determined COVID-19 responses, including vaccination policies and uptake⁹.

Conclusion

The links between democracy and public health are undeniable. Voting is more than a civic duty; it is a powerful means to advance public health objectives and narrow inequalities. By participating actively in the electoral process, citizens can shape public policy and determine who will be responsible for safeguarding the health and well-being of us all.

The European Public Health Association (EUPHA) is the umbrella organisation for public health associations and institutes in Europe. EUPHA has 83 members from 47 countries. Our network brings together over 32,000 public health professionals. Our mission is to facilitate and activate a strong voice of the public health network by enhancing visibility of the evidence and by strengthening the capacity of public health professionals. EUPHA contributes to the preservation and improvement of public health in the European region through capacity and knowledge building. We are committed to creating a more inclusive Europe, narrowing all health inequalities among Europeans, by facilitating, activating, and disseminating strong evidence-based voices from the public health community and by strengthening the capacity of public health professionals to achieve evidence-based change.
